IFToMM is a world-wide organization of Mechanism and Machine Science. My scientific activity since the student years was associated with the use of knowledge on the theory of mechanisms and machines in transport engineering.

My main scientific results were obtained in the following areas:

- Theory of wheeled and caterpillar vehicles movement;
- Structural-parametric synthesis of planetary gears;
- Structural-parametric synthesis of mechanical, hydrostatic and hydrodynamic transmissions of vehicles;
- Mechanical speed variators.

I believe that my participation in your organization can bring mutual benefit in terms of sharing experience and information, participating in international scientific conferences and further developing the science of machines and mechanisms.

Regards, Dmitry Volontsevych.
