

Newsletter entry from PC Standards and Terminology, december 2008

The 22th working meeting was successfully held in Lyon (Fr), June 29 – July 4, 2008. The 15 attendees agreed on a small set of revised terms on “basics in kinematics”. The revision activity will be continued, also for “basics in Dynamics” and “Gearing”. Working groups were established for new chapters: Reliability (quality factors), Transportation Machinery and Compliant Mechanisms.

Regarding better visibility of IFToMM results: the dictionary website has a link now to a list of all officers that contributed to the terminology. The website runs at present successfully at the webserver of the TU Delft (www.iftomm.3me.tudelft.nl).

Delft, December 19, 2008
